## 4. Data Sources & Methodology

# 1. Executive Summary

This report presents a comprehensive SEO audit of **weightlosspercentage.com** for a **Health & Fitness Calculator / Publisher (YMYL) — free calculators + dietitian-reviewed blog** site, generated on August 08, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

**57/100**

SEO HEALTH SCORE

## Critical Issues Found:

1. **Info:** CRITICAL: Live site serves stale build — homepage and 22 other pages emit canonical `http://localhost:4321` (homepage, /about/, /contact/, /blog/, /calculators/, /nutrition/, /compare/, 3 blog posts + locale variants). dist/dist2 built with wrong site config; dist3 is correct.
2. **Info:** CRITICAL: Soft-404s — Cloudflare SPA fallback `'/* /index.html 200'` returns HTTP 200 with homepage content for any missing URL; `/calculators/weight-loss/from-120-to-114/` is a phantom page.
3. **Info:** HIGH: robots.txt Cloudflare-managed block disallows GPTBot, ClaudeBot, Google-Extended, CCBot, Bytespider, Amazonbot, Applebot-Extended, meta-externalagent before the site's Allow groups — AI crawlers remain blocked, contradicting ai.txt.
4. **Info:** HIGH: Index bloat — 13,832 of 14,350 sitemap URLs are programmatic BMI/from-to-weight pages with no quality gate.
5. **Info:** HIGH: Homepage duplicate JSON-LD (2x Organization, 2x FAQPage, 2x WebApplication) risks rich-result suppression.

## Quick Wins:

1. Rebuild with current config and redeploy dist3; purge Cloudflare cache; verify homepage canonical is `https://www.weightlosspercentage.com/`.
2. Move AI-crawler Allow groups above the Cloudflare-managed robots block to unblock GPTBot/ClaudeBot/Google-Extended.
3. Replace `'/* /index.html 200'` with `'/* /index.html 404'` to stop soft-404s.
4. Add visible author byline, review date, and references section to blog articles.
5. Emit default OG/Twitter tags on every template (missing on 475/500 pages).

## 2. Audit Categories

### 2.1 Technical SEO

Score: **45/100**

#### What Works

- Clean single-host redirection (http 301, non-www 301, trailing slash 308)
- All 120 sampled sitemap URLs return 200
- HSTS preload, nosniff, frame-options, referrer-policy headers
- HTTP/3 + Brotli via Cloudflare

#### Findings

##### Localhost canonical on 23 pages incl. homepage (stale deploy) **Critical**

Live curl of / and /about/ shows rel=canonical http://localhost:4321/... and og:url localhost. dist/ and dist2/ were built with site http://localhost:4321; dist3 (current source) is correct. Homepage, /about/, /contact/, /blog/, /calculators/, /nutrition/, /compare/, /blog/postpartum-weight-loss-safe-guide/, /blog/water-fasting-weight-loss/, /blog/weight-loss-plateau/, /calculators/weight-loss/from-120-to-114/ and locale variants affected.

**Recommendation:** Rebuild (npm run build -> dist3), redeploy from dist3, purge CDN cache. Verify homepage canonical is https://www.weightlosspercentage.com/.

##### Soft-404s from SPA fallback **Critical**

Nonexistent URL returns HTTP 200 with homepage content via '/\* /index.html 200' in \_redirects. /calculators/weight-loss/from-120-to-114/ is a phantom page serving the homepage template.

**Recommendation:** Change catch-all to '/\* /index.html 404' or a real 404 page; keep 200 fallbacks only for locale SPA entry points.

##### No Content-Security-Policy; Access-Control-Allow-Origin: \* **High**

Security headers otherwise strong but no CSP and a wildcard CORS header on HTML responses.

**Recommendation:** Add CSP for known third parties (Ezoic, AdSense, GTM/GA4, Clarity, Ahrefs, fonts, Unsplash); remove wildcard ACAO.

### Sitemap lastmod static; coverage gaps **Medium**

All 9 sitemaps report lastmod 2026-07-30 regardless of content. /blog/anti-gravity-exercises-weight-loss/ not in sitemaps; phantom from-120-to-114 listed.

**Recommendation:** Regenerate lastmod from file mtime on each deploy; add missing article; drop phantom URLs.

## 2.2 Content Quality

Score: **55/100**

### What Works

- Blog avg ~1,012 words; calculator pages avg ~816 words
- Global Medical Disclaimer block on every page
- Article schema declares clinical author (Dr. Sarah Jenkins)
- Unique titles across crawled pages

### Findings

#### Weak visible E-E-A-T signals (YMYL health) **High**

Flagship article /blog/how-to-calculate-weight-loss-percentage/ has no meta author, no visible byline, no last-updated date, only 2 external references, no in-article disclaimer.

**Recommendation:** Add author byline + bio link, reviewed/last-updated line, and a Sources section with primary citations (CDC/WHO/NIH).

#### Thin localized pages (zh avg 70 words) **High**

/zh/privacy/ 47w, /zh/terms/ 47w, /zh/about/ 49w, /zh/calculators/ 59w. /ru/ avg 299w, /uk/ avg 288w.

**Recommendation:** Translate fully or noindex thin locale stubs.

#### Near-duplicate English locales **High**

UK/CA/AU/NZ homepages are 80.3-80.6% similar to US (sequence ratio); only re-spelling, not local content.

**Recommendation:** Add genuinely localized content (NHS/Health Canada guidance, local units) to differentiate.

#### 123/500 pages under 300 words **Medium**

24.6% of crawled pages are thin (legal pages excluded, but locale + some calculator/category pages affected).

**Recommendation:** Expand or merge; prioritize zh/ru stubs.

## 2.3 On-Page SEO

Score: **52/100**

### What Works

- 0 missing H1, 0 multiple H1, 0 missing meta descriptions, 0 noindex
- Hreflang tags with return links present on all sampled pages
- Meta descriptions on all 500 pages

### Findings

#### 23 broken canonicals (localhost) **High**

Inherits Technical critical finding; canonical correctness is an on-page factor.

**Recommendation:** Resolve via redeploy (Technical C1).

#### Title length issues **Medium**

328 pages >60 chars (truncation), 78 pages <30 chars. Examples: 'Calorie Deficit Calculator - Find Your Exact Daily Target (Free 2026)'.

**Recommendation:** Target 50-60 chars, keyword front-loaded, remove dated promo strings.

#### OG tags missing on 475/500 pages **Medium**

og:title/og:description/og:url present only on homepage and /about/; blog, calculators and locale pages lack them.

**Recommendation:** Emit SEO.astro OG/Twitter defaults on every template.

#### 25 meta descriptions under 50 chars **Low**

Mostly legal pages; verify no truncation artifacts.

**Recommendation:** Expand where warranted.

## 2.4 Schema / Structured Data

Score: **75/100**

## What Works

- Organization (462), BreadcrumbList (229), FAQPage (154), WebApplication (137), Article (83), MedicalWebPage (83), HowTo (73), Person (92)
- Detailed Article blocks (author, publisher+logo, dates, mainEntityOfPage)
- All blocks valid JSON-LD

## Findings

### Duplicated JSON-LD on homepage **High**

Homepage emits 2x Organization, 2x FAQPage, 2x WebApplication (identical). 90 pages emit  $\geq 6$  schema blocks. Cause: parser\_v2.ts does not strip JSON-LD from parsed head.

**Recommendation:** Strip JSON-LD in parser\_v2.ts (like canonical) or stop double-injecting; emit a single @graph.

### Missing WebSite/SearchAction; brand inconsistency **Medium**

No WebSite schema; author Person never linked via worksFor; 'WeightLossPercentage.com' vs 'Weight Loss Percentage' naming mismatch.

**Recommendation:** Add WebSite+SearchAction; unify brand; add Person.worksFor/url.

### Schema opportunities unused **Low**

Glossary (DefinedTermSet), compare pages (FAQPage/Article), nutrition (NutritionInformation) missing.

**Recommendation:** Add as content ships.

---

## 2.5 Performance (CWV)

Score: **55/100**

## What Works

- Blog post mobile LCP 1.6s, desktop 1.2s (good)
- BMI calculator mobile LCP 1.1s (good)
- Desktop homepage LCP 884ms

## Findings

### Homepage mobile LCP 4.7s (fails threshold) **High**

Playwright lab: mobile LCP 4,732ms vs 2,500ms threshold; CLS 0.078 'needs improvement'; 43.8s networkidle.

**Recommendation:** Preload LCP, gate layout spinner, lazy-load ads/consent, defer/self-host fonts, inline critical CSS.

**Third-party script bloat** **High**

92-95 resources and up to 877KB transfer on homepage (Ezoic, AdSense, GTM/GA4, Clarity, Ahrefs, fonts).

**Recommendation:** Restrict ads to content pages; lazy-load third-party; remove unused analytics.

**Render-blocking CSS/fonts; no LCP preload** **Medium**

Synchronous Google Fonts stylesheet in head; full-viewport white loader on every visit.

**Recommendation:** Inline critical CSS; font-display swap; remove/gate the loader.

---

## 2.6 AI Search Readiness

---

Score: **70/100**

### What Works

- High-quality llms.txt (manifest, licensing, formulas, AI permission)
- Excellent ai.txt (citation rules, per-calculator accuracy references)
- Static JS-free content; no paywall; strong schema
- PerplexityBot/ChatGPT-User/Gemini/cohere/OMgili allowed

### Findings

**robots.txt blocks major AI crawlers** **High**

Cloudflare-managed block (GPTBot, ClaudeBot, Google-Extended, CCBot, Bytespider, Amazonbot, Applebot-Extended, meta-externalagent) precedes custom Allow groups; first-match wins so they stay blocked despite ai.txt claiming permission.

**Recommendation:** Move AI crawler Allow groups above the Cloudflare block or remove them from the managed list.

**Localhost canonical poisons citations** **High**

Citable URLs resolve to http://localhost:4321 until redeploy.

**Recommendation:** Redeploy (Technical C1).

**Thin locales not citable; placeholder contact Medium**

zh/ru pages too thin for AI grounding; en locales near-duplicate. ai.txt contact is a placeholder.

**Recommendation:** Improve locale content; use a real contact email.

---

## 2.7 Images

---

**Score: 85/100**

### What Works

- 0 missing alt text across 500 pages
- og:image 1200x630 + twitter card on homepage
- Complete favicon set + manifest

### Findings

**OG image/tags missing on 475/500 pages Medium**

Social cards on blog/calculators/locales are bare.

**Recommendation:** Emit default OG/Twitter tags sitewide.

**No WebP/AVIF strategy; some imgs lack dimensions Medium**

Unsplash images via URL params; add width/height and lazy loading.

**Recommendation:** Serve WebP/AVIF with explicit dimensions.

## 3. Action Plan

### Phase 1: Critical Fixes Week 1

- Rebuild with current config and redeploy dist3; purge Cloudflare cache; verify homepage canonical (C1)
- Fix soft-404s: change SPA fallback to return 404 for unknown routes (C2)
- Move AI-crawler Allow groups above Cloudflare-managed robots block (C3)

### Phase 2: High-Impact Improvements Weeks 2-3

- Add visible E-E-A-T: author byline, review date, references section on blog (H1)
- De-duplicate homepage JSON-LD and unify brand in schema (H2)
- Emit OG/Twitter tags sitewide (H3)
- Add WebSite + SearchAction schema (H4)
- Trim 328 over-long titles to 50-60 chars (H5)
- Differentiate en-gb/ca/au/nz locale content; decide zh/ru strategy (H6)

### Phase 3: Content & Authority Month 2

- Quality-gate 13,832 programmatic BMI/from-to-weight pages (M1)
- Regenerate sitemap lastmod; fix coverage gaps (M2)
- Homepage mobile LCP under 2.5s (M3)
- Add CSP; remove wildcard CORS (M4)
- Own the head term: pick homepage vs /calculators/weight-loss/, align links/canonical (M5)

### Phase 4: Monitoring & Iteration Ongoing

- Verify field CWV in GSC/CrUX after deploy
- Track indexing of the 23 previously-broken pages; request re-indexing
- Monitor AI citations after robots fix
- Monthly sitemap/canonical/hreflang drift check
- Add glossary/compare/nutrition schema as content ships

---

## Data Sources & Methodology

---

| Source                  | Description                                                    | Update Frequency      |
|-------------------------|----------------------------------------------------------------|-----------------------|
| PageSpeed Insights API  | Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G) | Real-time             |
| Chrome UX Report (CrUX) | 28-day rolling field data from real Chrome users               | Daily ~04:00 UTC      |
| CrUX History API        | 25-week p75 trend data per metric                              | Weekly                |
| Google Search Console   | Search Analytics (clicks, impressions, CTR, position)          | 2-3 day lag           |
| URL Inspection API      | Per-URL index status, coverage state, crawl info               | Real-time (2,000/day) |
